Statement

by

Mr. Kittipong Saejeng, M.D.

Director

Bureau of Reproductive Health

Ministry of Public Health of the Kingdom of Thailand

before the 48 Session of the Commission on Population and Development

on agenda item 4: national experience in population matters: realizing the future we want: integrating population issues into sustainable development, including in the post- 2015 development agenda

13 April 2015
The United Nations, New York

Mr. Chairman, Excellencies, Distinguished Delegates, Ladies and Gentlemen.

- 1. At the outset, let me congratulateuyon your election as Chair of the the Commission on Population and Development great honoufor me to deliver Thailand's countrystatement at the 48Commission on Population Development. The theme this year on integratin population issues to sustainable development is very important for Thailand in goling the future of the pose 15 development agenda.
- 2. Thailand has achieved itselemographic dividend' with a larger share of working population and fewer dependents of the factors contributinto rapid economic growth in the past decades. With good coverage to filly planning services in place throughout the country for more than three decades together with the rural development policies introduced during that time, thai families have become maller with only one to two children per family, young peopheave access to education, the same of working population and fewer dependents.
- 3. Yet, the population trends in Thailand are progressing in ways that require new policy initiatives. Thailand's population growth has slew down considerably, and has been predicted to decline further with rapid ageing. The anging population structure has emerged as an issue of critical importance whong-term implications raising important planning issues with regard to assign to those population changes.

Mr. Chairman, Excellencies, Distinguished Delegates, Ladies and Gentlemen.

- 4. Recognizing thapeople must be at the center of sustainable development taking into account themportance of inclusivenessas well as outirm commitment to the Programme of Action of the International Conference on Population and Development (ICPD) and inter-linking it to the post-2015 development agenda Thailand is developing twenty-year National Population Development Planto tackle emerging population concerns. The plan provitored framework of three pillar strategies promotion of quality childbirths, enhancing productive workforces, and supporting active ageing The key content of the new populatipolicy is adoption of the right-based approach development throughout a life-cycleentsure that individuals in all age groups are self-reliant within secured veronment and quality of life.
- 5. Since 2002, Thailand haseen implementing the Universal Health Coverage (UHC) Initiative, which covers almost all relevant sexual and reproductive health services envisioned in the Programme of Action to International Conference on Population and Development (ICPD). Significant rogress in sexual and reproductive health was achieved well before the 1994 ICPD anthe 2002 UHC initiative. Theontraceptive prevalence rate for all methods has increased from 14%

National Family Planning Programme, to 79% in 2012. Thetotal fertility rate has fallen from 5.9 children per woman the 1970s td .6 in 2011.

6. Owing to sustained politicadommitments and effective programme implementation, was reversed from a generalized a concentrated epidemic between 1993 and 2006. HIV prevalence in pregnat women declined from a peak 25% in 1995 to 5% in 2012. The investment in preventing other to child transmission (PMTCT) reduced vertical transmission to 3.2% in 20.1 People living with HIV have received free antiretroviral (ART) with costs covered by UHC.

Mr. Chairman, Excellencies, Distinguished Delegates, Ladies and Gentlemen.

- 7. Despite such achievements, certain challesnopersist and othersave emerged. The adolescent birth rate and unmet need or contraception among young womenhave sharply increased. Further, a sphaltecline in use of longer times contraceptives, such as implants and IUDs as well as injection, shaccurred during a decade of the Universal Health Coverage, due to decentralized ngenaent of the family planning programme.
- 8. In attempts to avoid a continuedecline in fertility and in supporting the new National Population Development Policy, hailand is developing the National Reproductive Health Policy focusing on two main issues firsto halve teenage pregnancy rate by 2025, and second, to supportality childbirths for all.
- 9. To improve utilization of sexual and replacetive health services young people, the

people with full engagement men and boys, as well semilies and communities, as agents of change in proming gender equality. Thailand upports development of appropriate policies to promote the promot

Mr. Chairman, Excellencies, Distinguished Delegates, Ladies and Gentlemen.

12.At the regional level, the ASEAN post-2015 visions which lays down ASEAN development goals, are in line with the post-
