

**REMARKS FOR DTC**  
**UN FOOD SYSTEM SUMMIT**

Secretary Vilsack:

improve the systems that impact hunger, poverty, and malnutrition.

The United States has identified three priorities for food systems transformation.

- **Food security and nutrition for all.**

The United States and United Arab Emirates are spearheading a global initiative the Agriculture Innovation Mission for Climate with a goal of dramatically increasing public and private investment in climate-smart agriculture and food systems innovation.

We are also excited to launch a new coalition on Sustainable Productivity Growth for Food Security and Resource Conservation to motivate collective action to accelerate sustainable agricultural productivity growth that benefits farmers, consumers, and the planet. I invite all of you to join us.

We look forward to working with so many of you

access to nutritious meals in school by 2030. Likewise, we look reduce food loss and waste, a critical contribution to addressing climate change.

Administrator of the U.S. Agency for International Development, to discuss our global commitments.

**\*\*END OF REMARKS\*\***

## **Administrator Power, Feed the Future Global Coordinator:**

Thank you, Secretary Vilsack.

You just mentioned that half of the \$10 billion President Biden committed on Tuesday for food security will be invested here at home – a recognition that all countries, even those that produce a surplus of food, must take steps to improve nutrition and adapt their food systems to a changing climate.

The other half of that \$10 billion will be spent fighting *global* food insecurity, helping smallholder farmers and their families escape poverty – a recognition that the well fed have an obligation to care for the hunger of others.

With cong

security initiative, expanding its reach to additional countries.

strategy, to make sure that money does more good in the world.

That we focus more on inclusive agricultural growth that lifts up women, girls, and marginalized

That we invest tens-of-millions of dollars in fortifying foods with critical vitamins and minerals to fight malnutrition...

And that we double-down on climate-smart investments, like drought-tolerant seeds and carbon storage in soils, so the world can boost crop yields while cutting emissions.

With new investments and a new strategy, Feed the Future aims to contribute to a 20 percent reduction in poverty and stunting in target countries over the next five years.

But the United States cannot end hunger on its own — no country can.

We need the support of foundations and food scientists, donors and development agencies, private companies and partner countries, to not just feed the future, but build a future where hunger is a distant memory.

Thank you.
