

KASPERSKY SUBMISSION TO THE GLOBAL DIGITAL COMPACT

(APRIL 2023)

Kaspersky firmly welcomes efforts by the UN Secretary General to promote the concept of global digital commons and considers the Global Digital Compact initiative to be an important step in fostering digitalization worldwide.

1. Cyber Capacity Building Program. This initiative is aimed at the public sector, universities as well as small and medium businesses to help them develop mechanisms and skills for security assessments of the IT products they use.
2. Kaspersky Academy This initiative to improve the quality of cybersecurity related education was launched more than a decade ago and unites universities from nearly 70 countries from different parts of the world. A large number of projects, such as competitions and cybersecurity student communities, target students and teachers globally with no age restriction. Particular attention in the upcoming years will be paid towards cooperation with developing countries in Asia and Africa.
3. Cyber Resilience Project for kids This initiative was launched under the umbrella of the Kaspersky Academy on March 20, 2023, in Singapore. The goal of this project is to promote a culture of holistic cyber resilience in and through education, thus empowering teachers and students to navigate the digital world safely and responsibly. Another notable initiative, which is oriented to kids, is the publication of Very Special. Its aim is to inform children about online safety at a level suitable for them. The book is available in six languages: Arabic, English, German, Portuguese, Russian and Spanish.
4. Coalition Against Stalkerware. Back in 2019, Kaspersky was one of the founding members of this coalition which was created as a response to growing number of individuals affected by digital stalking. The initiative unites both organizations that work to combat domestic violence and the IT security community.
