## PHILIPPINE STATEMENT

55<sup>TH</sup> Session of the Commission on the Status of Women

22 February-4 March 2011

Thank you Mr. Chairperson

I have been attending the Commission on the Status of Women for almost a quarter of a century. But this 55<sup>th</sup> session of the CSW is extra special. With women all over the world, the Philippines is glad to celebrate the birth of the United Nations Entity for Gender Equality and the Empowerment of Women or U.N. Women. And we welcome Ms. Michele Bachelet as its first Undersecretary General and Executive Director. To say that interests and a lot riding on U.N. women at that particular time are very high would be an understatement. At the country level, our wish list is long - we wish that the U.N. at the country level was more engaged; that all UN agencies really work together; and we wish that the U.N. would help make gender centrality one of planning and programming's national mission for gender women like U.N. Women, are more highly placed and are brought to the mainstream of development planning and negotiations; that gender equality is revised, recalibrated and redefined to the doings of gender equality, and women's empowerment; that the U.N. work more closely and consistently with the women's movement; and a scaling of the women's movement. I wish to recognize the Gender Equality Architecture Reform (GEAR) Campaign, a global network of NGOs that works tirelessly for the creation of U.N. Women. Congratulations to all and together let us get to work.

The Philippines remains deeply committed to the Beijing Platform for Action, the Convention on the Elimination of all Forms of Discrimination Against Women (CEDAW), and the Millennium Development Goals. Our national efforts have been strengthened by the signing of the Magna Carta on Women, the comprehensive gender equality law which is this translation of CEDAW in national legislation.

Allow me to focus on some of this 55<sup>th</sup> Commission on the Status of Women. In almost every aspect of education, women and girls outnumber men and this is the Philippines. Girls fare better in terms of enrolment indicators in primary, secondary and tertiary levels. This is in line with the drop out rates lower for females.

To address the issue of high rates of female drop out in school, the Philippine Government scaled up its inclusive education plan through the Philippine Education for All 2015 Plan which aims to bring all school-age children to school through dropout reduction, improved school systems, distance education, and back-to-school grants for school youth and adults of all ages.

Globally, girls' enrollment in tertiary or higher education where women account for 51% of students and 57% of graduates in the Philippines, the Philippines is not immune to gender equality in access to education but access to quality education and those living in rural areas. We are also warned not to be lulled into complacency by simple statistics as gender sensitivity and access to gender fair education are also issues, particularly among older girls and young women suffer more subtle discrimination such as sexual harassment and violence against women and girls. There are also concerns about diagnosing gender marking in fields of study and career choice. Women dominate the fields of teacher education, humanities, social sciences, business administration, medical and allied fields, home economics, mass communication, and even natural sciences and mathematics, but remain underrepresented in engineering, technology, fine and applied arts, religion, marine biology, law and jurisprudence, science and environmental studies, agriculture, fisheries and forestry, and maritime studies.

To address this, the Department of Education conducted training of teachers and school administrators on integrating gender and development in the curriculum, gendered training to eliminate gender stereotyping in textbooks and instructional materials, and raising teacher's awareness of gender issues.

The Personal Safety Lessons (PSL) which aim to give information, develop self-esteem in children, increase their ability to resist sexual offenders were piloted in 14 schools in 3 regions.

At the tertiary level, faculty from universities have formed the Women's Studies Association of the Philippines committed to include gender and women studies in the general education curriculum in their fields of expertise, including agriculture, environment and science and technology.

Engineering professions. The College of Engineering of the University of the Philippines reports that 20% of the students are women comprising the majority in chemical engineering, industrial engineering and materials engineering and growing numbers in other fields. To boost enrollment in science and technology, Congress passed the Science and Technology Act of 1994, which aims to upgrade educational opportunities for women, among others, to pursue careers in science and technology.

It is important to note that while girls and women perform quite well in most educational indicators, their educational gains have not fully translated into real employment opportunities and better paying jobs.

The labor force participation of women remains low compared to men, especially higher educational levels. Men are more likely to be wage and salary and own account workers while women are likely to be unpaid workers and comprise 85% of the informal economy.

The Philippines is committed to advancing the Decent Work Agenda as spelled out in its Philippine Development Plan. The Decent Work Country Programme has been developed into National Plan of Action for Decent Work. This plan seeks to increase employment and income opportunities for women, and recognizes that gender is a major cross cutting issue that should be a major concern in all decent work projects.

To facilitate decent work, gender based discrimination legislation has been enacted in such areas as sexual harassment, the protection and the granting of paid paternity leave to married male employees. The Technical Education and Skills Development Agency

1998 has been continuously operating and focusing on activities that promote the economic empowerment of women and gender equality through training, research and advocacy, gender and development units, providing a whole range of vocational and technical education such as household service work and caregiving, opportunities and facilities for training of women in non-traditional trades such as auto mechanics, electronics, and welding. Recently, TESDA has issued a warning for employers to take note on data showing that female drivers have less accidents than male bus drivers.

To enhance the enabling environment for women's access to microenterprise development, the Philippine Commission on Women has developed services provided by agencies from the government economic cluster--trade and industry, science and technology, environment and natural resources, occupational safety and health as well as social protection agencies and the national health insurance system.

Two final points Mr. Chairperson.

The Philippine Government recognizes the important role of national mechanisms which promote and protect women's human rights stipulated in UN conventions and strongly supports the application for independent participation by national human rights institutions in CEDAW.

Finally, the Philippines has sponsored a resolution on mainstreaming Gender Equality and the Empowerment of Women in Climate Change Adaptation and Mitigation Strategies. We encourage member states to support our resolution.

Thank you.

the right form of government to now be combining some of our qualities  
with the more flexible and open system of government. We can see that this will  
be a difficult task, but it is one that we must undertake. We must work together  
and find ways to improve our government.

The Philippines is currently facing many challenges, but I believe that  
we can overcome them if we work together. We must continue to  
improve our government and make it more responsive to the needs of our  
citizens. We must also work towards creating a more just and equal society.  
We must work together to build a better future for our country.

As a member of the opposition party, I believe that we need  
to work together to bring about change. We must work together to  
improve our government and make it more responsive to the needs of our  
citizens. We must also work towards creating a more just and equal society.  
We must work together to build a better future for our country.

The Philippines is currently facing many challenges, but I believe that we need

improve our government and make it more responsive to the needs of our  
citizens. We must also work towards creating a more just and equal society.  
We must work together to build a better future for our country.

Thank you.

The Philippines Government has made great strides in  
improving its government and making it more responsive to the needs of its citizens.  
The government has implemented many reforms, including the  
constitutional changes that have been proposed by the opposition party.

Finally, the Philippines has adopted a new constitution,  
which provides for a more democratic and accountable government.  
The new constitution also protects the rights of citizens and  
ensures that the government is answerable to the people.

Thank you.
